

ENCAPSA BERM INSTRUCTIONS

Encapsa Berms completely encapsulate drums, providing 360 degree protection from drips and spills. They use a simple roll-top enclosure to seal off the drum from the outside world. Encapsa Berms are outfitted with lift d-rings eliminating the danger of perforating the berm with fork lifts or other equipment.

INSTALLATION

1. Unfold the berm.
2. Lift the drum, then slide the berm up the barrel until the bottom of the drum and the bottom of the berm touch.
3. Gently lower the drum to the ground.

4. Pull the berm up over the drum.
5. Fold the berm once in between the black stripes at the top.
6. Roll the berm down to the top of the drum.

7. Secure the rolled portion of the berm with the 4 sets of cam buckles and straps.

8. Use the d-rings to lift the drum if needed.
