## SAME SAND BETTER COVERAGE

AIRE Environmental Sand Snake Sleeves are designed to hold AIRE Environmental Diversion Tubes in place by weighing down plastic overlays. Sand Snake Sleeves help you fight flood waters and wind by extending the sand (not Included) you'd find in a normal 50lb sandbag over 36 feet. Sand Snake Sleeves are reusable and will last for years to come.

## FEATURES

- 6 Tubes/Package
- 3" Diameter x 6' Long
- 12mil Polyethylene Material
- Sewn Construction
- 6 Zip Ties Included
- Colors may be black or white due to fabric availability

## FILLING INSTRUCTIONS

1. Remove Sand Snake Sleeves from packaging
2. Locate the open end of each tube
3. Hold the tube up from the open end
4. Pour in sand using a large-volume funnel (not included)
5. Fill each tube with sand, leaving +/- 6" empty
6. Use the supplied zip ties to secure the end of each tube

# DIVERSION TUBE OVERLAY

Overlaying AIRE Environmental Diversion Tubes with plastic helps seal off more water. Similar techniques are used with conventional sand bags and other flood barriers to hold flood waters at bay. The overlay technique is most effective when the water-side edge is weighted down. Sand Snake Sleeves hold down the water side edge of the overlay without having to dig a trench and bury the plastic. This can be especially helpful when working with sensitive landscaping and hard surfaces like concrete or asphalt.

## INSTALLATION

1. Lay down a sheet of plastic (not included)
2. Place filled Sand Snake Sleeves on the water-side edge
3. Place and fill a Diversion Tube on top of the plastic.
4. Fold the rest of the plastic over the Diversion Tube
5. Use Sand Snake Sleeves to weigh down the folded plastic

## AFTER USE

After using AIRE Environmental Sand Snake Sleeves, they can be emptied, cleaned up and saved for future use.
